Engineering technology

ENGINEERING TECHNOLOGY - ENGTC

Tish Young, Dean
Physical Sciences and Engineering Division
Physical Sciences Building, Room 263

Possible career opportunities
Career options in engineering technology include civil engineering technicians, surveying and mapping technicians (cartography), architectural and civil drafters, and mechanical engineering technicians. Engineering technicians may work as computer-aided design drafters, engineering aides, land surveyors, field assistants, planning technicians and technical sales people.

Program-level student learning outcomes
Program learning outcomes are subject to change. The most current list of program learning outcomes for each program is published on the DVC website at www.dvc.edu/slo.

Associate in science degree
Civil design drafting technology

Students completing the program will be able to...
A. use technical drafting principles to develop technical drawings.
B. interpret construction blueprints.
C. use geometric construction and descriptive geometry to solve geometric problems.
D. create 2-dimensional and 3-dimensional computer aided drawings (CAD).
E. interpret global positioning data.
F. measure land forms using ground surveying equipment.
G. apply trigonometry to math problems.
H. apply the basic laws of physics to everyday situations.

The associate in science degree in civil design drafting technology provides students with the technical and analytical skills needed for employment in the field of civil engineering drafting. Through both academic and laboratory study students gain the practical skills needed for entry into the job market. For example, civil drafters may work on plans for major construction projects such as dams, roads, bridges, and sewage systems; or prepare, interpret and revise topographic and/or relief maps using computer-aided-drafting (CAD).

To earn the degree, students must complete each course used to meet a major requirement with a “C” grade or higher and complete general education requirements as listed in the catalog. Students who wish to transfer should consult with program faculty and college counselors to insure that the requirements for transfer to appropriate institutions are met. Certain courses may satisfy both major and general education requirements; however, the units are only counted once.

Associate in science degree
Industrial and manufacturing engineering technology

Students completing the program will be able to...
A. read the drawing for an object and visualize the geometry.
B. choose the correct manufacturing method for the object.
C. manufacture an object from a given drawing using machine tools.
D. use algebra, spreadsheets and measurement data to produce QC statistics.
E. verify that products meet the design criteria.
F. design and prototype mechanical parts under the supervision of engineers.
G. use computer integrated manufacturing (CIM) and computer numerical control (CNC) software for automation of manufacturing.
Engineering technology

The associate of science degree in industrial and manufacturing engineering technology is offered to prepare students with the required skills to enter the workforce as manufacturing technicians. The program emphasizes traditional and modern machining techniques along with additional concepts in technical drawing and geometric dimensioning and tolerancing.

Students completing this program will learn the skills to become a manufacturing technician working with traditional machinery such as lathes, mills, saws and drill presses as well as precision measuring devices. Students will also gain skills in the use of modern 3-D printing and Computer Numerical Control (CNC) equipment for computer controlled manufacturing. Graduates of the program may work as quality control technicians, pursue jobs in research and development, rapid prototyping and fabrication, and be able to design mechanical parts working in consultation with engineers.

The DVC industrial and manufacturing engineering technology major is not intended for transfer. Option 1 (DVC General Education) is advised for students who do not intend to transfer. Students who intend to transfer to a four-year baccalaureate program should consult with a counselor regarding specific major preparation requirements at the transfer institution of their choice. Students who intend to transfer are advised to select General Education Option 2 (IGETC) or Option 3 (CSU GE).

Students must complete each of the courses required for the major with a “C” grade or higher. Students may not take a pass/no pass option for major courses. Certain courses may satisfy both a major and general education requirements; however, the units are only counted once.

**Associate in science degree**

**Industrial maintenance machinist/mechanic (mTECH)**

Students completing the program will be able to...

A. discuss the role of the industrial maintenance machinist/mechanic in shop and field maintenance safety.
B. interpret blueprints and technical drawings for parts manufacturing and maintenance repair operations.
C. grind high speed steel tool bits for general purpose turning and threading.
D. cut multiple lead and acme threads on a lathe.
E. use the vertical milling machine to drill holes, index, bore holes to a specified diameter and depth, mill surfaces and edges, and use an indicator to reference work.
F. replace a single mechanical seal in a centrifugal pump.
G. align a pump shaft to a motor to a specified tolerance.

This program prepares students for jobs in the manufacturing industry including industrial machinery mechanic and machinery maintenance worker. These jobs involve repairing, installing, adjusting, or maintaining industrial production and processing machinery or refinery and pipeline distribution systems. The labor market for this high-technology, high-wage occupations in Contra Costa Alameda and Solano counties is expected to be strong.

Courses include machining, industrial hydraulics and pneumatics, shop and field maintenance, welding, basic electricity, blueprint drawing and reading, basic drafting, mathematics, computer software, and technical reading and writing. Major courses are offered sequentially over a period of three terms. This program is offered as a collaborative program with Los Medanos College in Pittsburg and Laney College in Oakland. Students may complete courses at any of the colleges in order to meet requirements. Some required courses are only offered at Laney College, Los Medanos College or DVC. Students are advised to meet with a counselor or program advisor to develop an educational plan that meets their needs.

The DVC mTECH major is not intended for transfer. Option 1 (DVC General Education) is advised for students who do not intend to transfer. Students who intend to transfer to a four-year baccalaureate program should consult with a counselor regarding specific major preparation requirements at the transfer institution of their choice. Students who intend to transfer are advised to select General Education Option 2 (IGETC) or Option 3 (CSU GE).

Students must complete each of the courses required for the major with a “C” grade or higher. Students may not take a pass/no pass option for major courses. Certain courses may satisfy both a major and general education requirements; however, the units are only counted once.
DIABLO VALLEY COLLEGE CATALOG 2017-2018

Associate in science degree
Mechanical design drafting technology
The Engineering Technology program has removed this degree from the catalog. Students should be advised that it may not currently be possible to complete the requirements for this degree, although coursework transferred from other schools may allow a student to complete the requirements for the degree or certificate. Additionally, students can request course substitutions from the program director and any student in progress should contact the Engineering Technology program director for advisement.

Certificate of achievement
Civil design drafting technology
Students completing the program will be able to...
A. use technical drafting principles to develop technical drawings.
B. interpret construction blueprints.
C. use geometric construction and descriptive geometry to solve geometric problems.
D. create 2-dimensional and 3-dimensional Computer Aided Drawings (CAD).
E. interpret global positioning data.
F. measure land forms using ground surveying equipment.
G. apply trigonometry to math problems.
H. apply the basic laws of physics to everyday situations.

This certificate program prepares students for an entry level job as a civil drafter. Drafters work under the supervision of civil or structural engineers, architects, and/or surveyors as support staff in jobs requiring them to prepare, interpret, and revise technical drawings, or gather and categorize field data. Engineering technicians work as support staff in field, laboratory and/or office environments.

To earn a certificate of achievement, students must complete each of the required courses with a “C” grade or higher. Some courses are not offered every term so please consult with the program director for assistance in scheduling classes.

Certificate of achievement –
Mechanical drafting, CAD
The Engineering Technology program has removed this degree from the catalog. Students should be advised that it may not currently be possible to complete the requirements for this degree, although coursework transferred from other schools may allow a student to complete the requirements for the degree or certificate. Additionally, students can request course substitutions from the program director and any student in progress should contact the Engineering Technology program director for advisement.

Certificate of accomplishment
Computer aided drafting and digital media for architecture, industrial design and engineering
Students completing the program will be able to...
A. create 2-dimensional and 3-dimensional computer aided drawings (CAD).
B. interpret construction blueprints and architectural plans (with Option A: civil engineering emphasis).
C. calculate data collected from land surveying (with Option A: civil engineering emphasis).
D. interpret simple technical drawings (with Option B: manufacturing emphasis).
E. construct 3-Dimensional models using parametric software (with Option C: CAD design emphasis).

Drafters make drawings and plans to specify dimensions, materials and processes used in the making of a final product. These drawings are guidelines for the workers who will actually build or make whatever is being produced. Drafters also make drawings from blueprints, engineering sketches, photos and other sources which show how parts and other objects work, their relation to one another, and how they will be put together. Drafters create drawings and plans to specify dimensions, materials and processes for the finished product. Such drawings and plans provide guidance to those working to complete the finished product. Drafters also render drawings from blueprints, sketches, photos and other sources which show the interplay of components and their relationships to one another, and to provide guidance for final assembly.

To earn a certificate of accomplishment, students must complete each of the required courses with a “C” grade or higher. Some courses are not offered every term. Consult with the program director for assistance in scheduling classes.

ENGTC-111 Mathematics for Technicians
3 units  LR
- 54 hours lecture per term
- Prerequisite: MATH-090 or MATH-090E or MATH-090SP or equivalent
- Formerly ENGIN-111

This course is a study of mathematical topics used for technical applications in the workplace. Topics include algebraic operations, factoring, fractional equations, quadratic equations, rational, square root, exponential, absolute value and logarithms. Calculation of surface areas and volumes of objects, polynomials and systems of equations is covered. CSU
ENGTC-119  Introduction to Technical Drawing
3 units  SC
• 36 hours lecture/72 hours laboratory per term
• Note: Same as ARCHI-119. For students with no previous drafting experience. Credit by examination option available.
• Formerly ENGIN-119

This course is an introduction to the use of technical drawing tools, technical lettering and line work, geometric construction, sketching and shape description, orthographic projection, dimensioning, section views, auxiliary views and pictorials. Introduction to the use of computers to produce technical drawings. CSU

ENGTC-123  Principles of Civil Drafting
3 units  LR
• 36 hours lecture/72 hours laboratory per term
• Recommended: ENGTC-111 (may be taken concurrently), ENGTC-119 and ENGTC-126 or equivalents
• Formerly ENGIN-123

Introduction to civil drafting as it relates to topographic maps and charts. Course covers reading, interpreting and constructing a variety of maps used for civil engineering such as surveyor maps, plat and plot maps, and aerial maps. Students will use both manual and computer methods for drafting of maps. CSU

ENGTC-126  Computer Aided Design and Drafting - AutoCAD
3 units  SC
• 36 hours lecture/72 hours laboratory per term
• Recommended: ARCHI-119 or ENGTC-119 or equivalent
• Note: Students may petition to repeat this course when software or hardware is changed. Only the first course completed will be applied toward a degree or certificate requirement. Units for both courses will apply toward the 60 units required for the degree. Credit by examination option available.
• Formerly ENGIN-126

This introductory course covers the fundamentals of AutoCAD, a computer design drafting program, applied to the creation of technical drawings. Hands-on training utilizing a comprehensive overview of the software package and its applications to engineering drafting is stressed. CSU, UC (credit limits may apply to UC - see counselor)

ENGTC-129  Product Design I Using SolidWorks
3 units  SC
• 36 hours lecture/72 hours laboratory per term
• Recommended: ARCHI-119 or ENGTC-119 or equivalent
• Note: Students may petition to repeat this course when software or hardware is changed. Only the first course completed will be applied toward a degree or certificate requirement. Units for both courses will apply towards the 60 units required for the degree. Credit by examination option available.
• Formerly ENGIN-129

This course will introduce students to product design using SolidWorks. Students will learn the functions of SolidWorks and how to apply these functions within the product design process. CSU

ENGTC-160  Introduction to Industrial and Manufacturing Engineering
3 units  LR
• 54 hours lecture per term
• Recommended: ENGTC-111 or equivalent
• Formerly ENGIN-160

This course presents methods of manufacturing steel, aluminum and plastic products from ore mining to finished goods. Blueprint reading, quality assurance, types of machinery used in manufacturing, methods of casting, forming, forging, extrusion and sintering of materials will also be covered. CSU, UC

ENGTC-162  Geometric Dimensioning and Tolerancing
1 unit  LR
• 9 hours lecture/27 hours laboratory per term
• Recommended: ENGTC-111 or equivalent
• Formerly ENGIN-162

This course will present the principles of geometric dimensioning and tolerancing (GDT). Topics include GDT symbols, datum planes, material conditions, orientation, location, profile and runout tolerances. Laboratory assignments emphasize measurement using granite tables and pin and height gauges. CSU, UC

ENGTC-165  Manufacturing Processes: Material Machining I
3 units  LR
• 36 hours lecture/72 hours laboratory per term
• Recommended: ENGTC-119 or ARCHI-119 or equivalent
• Formerly ENGIN-165

This course introduces practical and theoretical aspects of machine tool processes including basic blueprint interpretation, use of hand tools, measuring instruments and gauges, layout, inspection techniques and metals identification. Set up and operation of drill presses, band saw, grinders, lathes, milling machines and related tools will be covered. CSU
ENGTC-166 Manufacturing Processes: Material Machining II
3 units LR
• 36 hours lecture/72 hours laboratory per term
• Recommended: ENGTC-165 or equivalent
• Formerly ENGIN-166
This course presents precision measuring and inspection practices, mechanical hardware, advanced lathe and vertical milling machine operations; surface grinding; thread cutting; boring on lathes and vertical milling machines and special work holding devices. Topics include the theory and application of advanced techniques for machining ferrous/non-ferrous metals, plastics and non-traditional materials in addition to an introduction to Geometric Dimensioning and Tolerancing (GDT) and properties of materials associated with machinability, heat treating and hardness testing. CSU

ENGTC-168 Introduction to Computer Numerical Control
3 units SC
• 36 hours lecture/72 hours laboratory per term
• Recommended: ENGIN-120 or equivalent
• Formerly ENGIN-168, ENGIN-172
This course introduces students to Computer Numerical Control (CNC) machining. Students will learn the techniques of developing and programming cutting tool paths and movements using three-dimensional CAD models and working drawings. Instruction will cover the use of Computer Integrated Manufacturing package (CIM) software and visualization of cutting operations. Topics will also include setup and operation of CNC equipment for manufacturing. CSU

ENGTC-175 Hydraulic and Pneumatic Systems and Components
3 units SC
• 18 hours lecture/108 hours laboratory per term
• Formerly ENGIN-175
This course covers the practical and theoretical aspects of hydraulic and pneumatic systems. Topics include concepts, theory and common systems, components and devices. The laboratory emphasizes hands-on exercises in operation, maintenance and mechanical skills. CSU

ENGTC-176 Mechanical Systems and Components
3 units SC
• 18 hours lecture/108 hours laboratory per term
• Formerly ENGIN-176
This course covers mechanical systems with an emphasis on mechanical drives, flexible belt drives, lubrication, bearings, vibration, and rotating equipment. Topics include operation, maintenance and repair of mechanical systems and components used in a variety of industrial occupations. CSU

ENGTC-226 Computer Aided Drafting Design, Advanced Concepts - AutoCAD
3 units SC
• 36 hours lecture/72 hours laboratory per term
• Recommended: ENGTC-126 or ARCHI-126 or equivalent
• Note: Same as ARCHI-226. Students may petition to repeat this course when software or hardware is changed. Only the first course completed will be applied toward a degree or certificate requirement. Units for both courses will apply towards the 60 units required for the degree.
• Formerly ENGIN-226
This course covers the concepts and applications of constructing digital three-dimensional (3D) models and photo-realistic renderings for presentation using AutoCAD, 3D Studio Max and Alias. Advanced techniques for surface, wireframe and solid modeling will be presented. Students will explore lighting, materials mapping and rendering as they apply to architecture, engineering and industrial design. CSU, UC (credit limits may apply to UC - see counselor)
