

How Do I Use The Wi-Fi On Campus?

Before you begin, make sure you know your InSite username and password. Campus Wi-Fi is for student use. Guest Wi-Fi is only available to vendors on campus.

1. Enable the Wi-Fi on your device, and search for available networks.
2. A few Wi-Fi networks will be listed. To connect as a student, we need to select the “College-Students” Wi-Fi network.
3. You should automatically be taken to a landing page where it will ask you to enter your username and password (if this does not happen, see step 4). Both should be the same as your InSite username and password. After you have entered this information you should be connected to the Wi-Fi.

4. If the landing page does not automatically show up, open your web browser and try to load a new webpage. If you still do not see the landing screen, try going to a site that you do not visit very often—this should force your browser to redirect you to where you need to go. You should then be on a page where you can sign in using your InSite username and password.

If you are experiencing problems with this process, you will need to contact the District IT Help Desk at (925) 229-6888, or by email: IT-help@4cd.edu.
